The Green Point Project is a 2600 s.f. live work residence built almost entirely from wood. The project is striving for 3 significant sustainable certifications, Passive House, Living Building Challenge, and Green Shores for Homes. Wood was selected as the choice of construction because of its strength, renewable qualities, natural beauty, versatility and abundance locally. The Design is inspired by early First Nations longhouses and rural farm buildings along the coast of Vancouver island.

5353 Gore Langton Road, Cowichan Bay, British Columbia

Saturday, November 9th One tour only: 10am to 11am
